

SHK position for HYPE project

The main focus of the research group "Cognitive Neurophysiology" (head: Prof. Dr. Christian Beste) at the Department of Child and Adolescent Psychiatry and Psychotherapy and the Institute of Psychology at the TU Dresden is the investigation of neurophysiological processes underlying higher-level cognitive functions in healthy people and neuropsychiatric diseases.

For the next possible point of start, we would like to recruit a student assistant (9hr/week; initially 6 months) for an ongoing research project that investigates implicit learning in Tourette disorder and neurotypical participants.

The tasks include

- recruitment;
- conducting structured interviews with the participants; and
- occasionally providing help in the EEG lab.

Working with participants requires German knowledge, while communication with project members is in English. Previous experience with EEG methods is not required.

We are looking forward to receiving your application documents (CV, letter of motivation, academic certificates if present), which you should send by e-mail until 23rd of September: adam.takacs@uniklinikum-dresden.de.

Please contact Adam Takacs, for further details.
